Name	The simulation of machining processes and techniques (SolidWorks, SolidCam, RP) - Tutori					
Code	CTC-RI-01					
ECTS	4					
Location	CTC – Center for Cooperation and Training, University of Rijeka					
Trainer/s	Faculty of Engineering, Vukovarska 58, 51000 Rijeka, Croatia					
Purpose	Assistant Hrvoje Radelja mag.ing.mech., assistant Sven Maričić mag.ing.mech. (CV enclosed) New market demands in terms of cost, short period of product development and product					
	quality necessitate the application of more efficient ways of designing the products and tools, which includes the use of new CAD / CAM technology for modeling and simulation, and rapid prototyping. The study and analysis of the process, its visualization through virtual simulation models obtained is a proofed way to increase the efficiency of design and quality of the finished product. Rapid prototyping provides a quick and effective means for testing and optimization of the product.					
Recommended entry level	University (master) degree, engineering studies					
Special requirements	Computer skills in Windows environment					
Duration	40 hours					
General	Trainees should be able to:					
objectives	explain the importance of modeling and simulation in designing products and					
	processes					
	<ul> <li>use of modern tools for product modeling and simulation of machining processes</li> <li>define the technological process of machining the work piece, simulate and optimize</li> </ul>					
	<ul> <li>define the technological process of machining the work piece, simulate and optimize process</li> </ul>					
	<ul> <li>prepare a model for export to standard formats for printing on any of the Rapid</li> </ul>					
	Prototyping Machine					
	define the parameters of the model conversion					
	pre-print the model					
Tentes						
Topics	<ol> <li>SolidWorks - creating sketches</li> <li>SolidWorks - modeling 3D parts</li> </ol>					
	3. SolidWorks - modeling assemblies					
	4. SolidWorks - drafting					
	5. SolidWorks – weldments					
	6. SolidCAM - CAM model definition					
	7. SolidCAM - define the processing technology of turning and milling					
	8. SolidCAM - simulation, parameter selection and process optimization					
	<ul> <li>9. SolidCAM - 4 axis milling</li> <li>10. Rapid prototyping</li> </ul>					
Specific	Topic 1: SolidWorks - creating sketches	Number of hours	2			
learning	Trainees should be able to:					
outcomes in	use software package SolidWorks					
topics	create model sketches					
	Topic 2: SolidWorks - modeling 3D parts	Number of hours	4			
	Trainees should be able to:					
	<ul> <li>create a 3D model of the individual parts using the Part De use an integrated library of standard elements</li> </ul>	esign module				
	use an integrated library of standard elements					
	Topic 3: SolidWorks - modeling assemblies	Number of hours	4			
	Trainees should be able to:		•			
	<ul> <li>assemble complex products and components built from se</li> </ul>	veral individual parts				
	<ul> <li>modeling of individual parts, bearing in mind their function in the assembly (Design</li> </ul>					
	Intent)					

Fostering an Integration of the Knowledge Triangle			TEM	PUS	
KIIOWIE	Topic 4: SolidWorks - drafting		Number of hours	2	
	Trainees should be able to:		,		
	make, edit, and automaticaly generate drafts				
	Topic 5: SolidWorks - woldmon	ats	Number of hours	3	
	Topic 5: SolidWorks - weldments Trainees should be able to:		Number of nours	3	
		he profile module SolidWorks Wel	dments		
	<ul> <li>model stiffeners and well</li> </ul>				
		n for the profile construction			
	Topic 6: SolidCAM - CAM mod	el definition	Number of hours	2	
	<ul> <li>Trainees should be able to:</li> <li>define CAM model</li> </ul>				
		ostprocessor for the application of t	the simulated model to	the	
	CNC machine	ostprocessor for the application of t			
		coordinate systems of processing			
	<ul> <li>define workpiece clamping</li> </ul>				
	Topic 7: SolidCAM - turning an	id milling	Number of hours	8	
	Trainees should be able to:	dure of turning or milling appording	a to the desired asome	tru (	
	choose the correct procedure of turning or milling according to the desired geometry     of the workpiece				
	define operations				
	<ul> <li>define operations</li> <li>define the geometry, tools and technological parameters of processing</li> </ul>				
	Topic 8: SolidCAM - simulation	n, parameter selection and	Number of hours	2	
	process optimization Trainees should be able to:				
		ry and the production process using	a simulation		
	<ul> <li>test process for tool colli</li> </ul>		g sintulation		
	<ul> <li>select and adjust the pro</li> </ul>				
	· · ·				
	Topic 9: SolidCAM - 4 axis mil	ing	Number of hours	3	
	Trainees should be able to:				
	<ul> <li>model simultaneous and</li> </ul>	indexial 4-axis milling			
	Topic 10: Rapid prototyping		Number of hours	10	
	Trainees should be able to:				
		els in various formats for 3D printing	g		
	<ul> <li>create and analyse .STL</li> </ul>		•		
	<ul> <li>analyse the geometry</li> </ul>				
		uring the model conversion			
	choose among different	printing parameters for print on a 3	D printer		
Portfolio	Acquired knowledge and skills w	ill be checked by evaluation exerci	ses and exams		
assessment				uired	
assessment	<b>Exercises</b> : trainers will define exercises by which can evaluate the degree of acquired knowledge. Tasks can be carried out individually or as a team, in groups of 2-5 students.				
		d skills will be checked by written n			
		the basis of collected points. The	e final grade is derive	ed as	
	follows:				
	<ul> <li>80-100% of the collected</li> <li>65-79% of collected poir</li> </ul>				
	<ul> <li>50-64% of collected poir</li> </ul>				
	· · · · ·	are of certain topics of the modu	ule will be defined lat	er.
